3X4U Guinea Dxpedition -update November 19

Today we had a good F2 opening on 6 metres. Ronald and Marc worked more than 100 new stations, mainly from northern Europe. Callsign prefixes worked included ON, PA, LX, DL, F, G, GI, GW, EA, EA8, 9Y, CT, PY, LU and CT2. Our EME QSO count is climbing too!

XR0Z Alexander Selkirk Island SA-101 -update by Felipe XQ7IR

Due to adverse weather conditions, which forced us to postpone our originally planned trip to Alexander Selkirk Island, we are pleased to announce our updated schedule.
New arrival date on Alexander Selkirk Island is currently scheduled for November 24, 2026, and we hope to be ON AIR on November 25 or 26, depending on weather conditions present on the island and the time required to set up stations.
As a result of this postponement, we have also had to apply for a new extension of the license. The previously assigned callsign XR0Z has been requested for the period from November 11 to December 23, 2026, to accommodate the new expedition dates.
The delay was necessary due to the challenging weather conditions associated with the influence of the El Niño phenomenon, which have affected our original plans and made it essential to prioritize the safety of everyone involved.

V5/G0RIB Namibia -update by Allan G0RIB

Another week has passed and we have doubled the number of FT8 contacts to over 600 (not using any robots) and now worked 65 countries. It has been hard going with far less propogation than we had last week on the bands. We are able to work only 15m to 10m. Still favouring the vertical which has required a few repairs to the pole mounting as it has taken a hammering due to very strong winds we get late afternoons here. It is amazing the aerial is still in one piece! Tried running on battery but still noisy so I took the FT-897 out away from the hotel and although it was much quieter on the lower bands, we have far less opportunity to do this due our hotel based workload.

5H3DX Tanzania -update by Chas NK8O

We are here in Chihoni, and I have the station back up and running. The bands have been up and down, and a little odd at times, but they are working a good bit of the time. There have been a few good pile-ups on 10 meters, which is a nice change. If you have worked 5H3DX recently on FT4 or FT8, surprise! The station is running a whopping 4 watts. I am very pleased at the number of QSOs made with QRP. The main CW station is running 100 watts. I have added capability to work SSB on the remote station, although on the trip here the mic I intended to bring was apparently displaced. The setup may also allow digital operation though the K3 as well. This will allow me to work other bands, since the QRP QDX only works 80-20m.

3Y0L Peter I Island Dxpedition -update

The next $600,000 payment for the vessel is due next week. By then we will have covered 50% of the total cost of the boat.

We have recently received generous contributions from groups such as LA DX Group, Madison DX Group, Twin City DXA, Arkansas DXA, Chiltern DXC (UK), and Northern Illinois DXA, among others; all of them have generously supported the expedition to Peter I Island. Thank you very much!

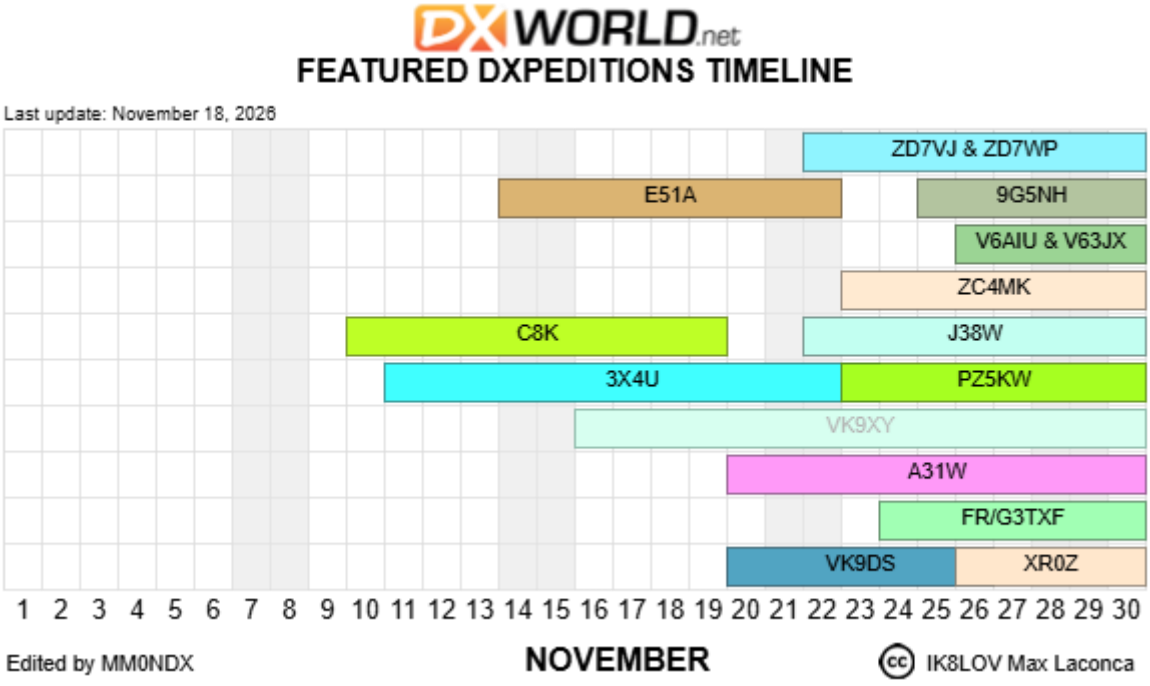

In approximately one month we have raised $190,000 – a figure that the team greatly

appreciates.
Most donations come from the United States, Japan, and Norway which top the list of contributing countries. Since the number of donations from Europe is lower, we encourage all European radio amateurs to contribute, either through their clubs or individually.

C8K Mozambique -now QRT
The man behind the many photos published by DX-World of the C8K DXpedition – Ludek OK2ZC. Team now have over 70K QSOs.

Antarctic destinations

Troll Station 3Y6BUA by Runar LA6BUA

I will be travelling to the Troll Research Station in Antarctica, and will stay there November 2026 to December 2027.
During this time I will hopefully operate SSB and digital modes from early on, and eventually (hopefully) CW when proficient enough. I will either be operating as **3Y6BUA** or using a special callsign. The bulk of the operating will most likely not be before March to November 2027.
Planned gear for the period is a Yaesu FTDX-10 and Icom 7300Mk2, an Acom 1010 linear amplifier for up to 1000W TX power. With this setup I hope to be loud for many. I am not yet sure what the antenna setup will be, but most likely wire dipoles for 10m, 20m, 40m and maybe 80m. I hope that I will get the chance to make a beam.

KC4/KL5SE and KC4USV

An update from Andrew **KC4/KL5SE** as follows: "*I plan to head to Windless Bight on Thursday and should be QRV by Saturday if all goes as planned*."
Andrew KL5SE is currently travelling South for a new scientific campaign in Antarctica! Just like last year, he will be visiting three field camps, very rare spots for ham radio.
After a stopover at the U.S. McMurdo Station, he will head to Windless Bight, and will also visit Mt. Newall and Bull Pass. As time allows, he will also operate the ham shack in McMurdo as **KC4USV.**
He will be active (using the callsign **KC4/KL5SE**) from each of the three camps using the following setup: FT-710 transceiver and either a 20m or 80m EFHW antenna.

HF0PAS South Shetland Islands

Rafal, SQ4O informs that all going well, he will try to be active as HF0PAS from the Henryk Arctowski Polish Antarctic Station, King George Island, South Shetland Islands after May. He will remain there until February 2027. News updates will posted on the HF0PAS QRZ page.

ZS7ANF Antarctica -update by Frank F8DVD
As in previous years, Oleg ZS7ANF will be working in Antarctica again this season. Currently in Cape Town, he is heading to Antarctica in the coming days. The season is going to be more or less the same as usual, until February 20, 2027. He plans to be active with the callsign ZS7ANF from Wolf's Fang Runway, Which Away camp, and maybe from some remote places. Let's hope so! He will be working with a FT-710 transceiver and wide band dipole and SteppIR vertical antenna. Update November 4: Oleg arrived Whichaway camp on October 31st. At the time there was a strong wind blowing so he was unable to erect or install any antenna. However, he's now QRV (17m CW). QSL via RK1PWA.
